Medicine, Mayo Clinic Sports Medicine Center, Rochester, MN

10 Associate Clinical Professor, Family Medicine Residency Program Director, Sports
Medicine Fellowship Program Director, University of Kansas School of Medicine-Wichita,
Wichita, KS
INTRODUCTION

The following sports ultrasound (SPORTS US) curriculum is a revision of the curriculum developed by the American Medical Society for Sports Medicine (AMSSM) in 2010. Several changes have been made to the curriculum with the primary aim of providing a pathway by which a sports medicine fellow can obtain sufficient SPORTS US training to become proficient in the core competencies of SPORTS US. The core competencies of SPORTS US are outlined in the learning objectives section of this document.

The term “SPORTS US” was purposefully chosen rather than “musculoskeletal ultrasound” (MSK US) since it was recognized by the panel that the evolving field of SPORTS US encompasses non-MSK applications of ultrasound such as the FAST examination (focused assessment with sonography for trauma). While the SPORTS US core competencies in this curriculum are all MSK in nature, they represent the minimum SPORTS US knowledge a sports medicine fellow should acquire during fellowship. However, additional training in more advanced MSK and non-MSK applications of ultrasound can be provided at the fellowship director’s discretion.

Completion of this SPORTS US curriculum fulfills the American Institute of Ultrasound in Medicine’s (AIUM) requirements to perform a MSK US examination, and the prerequisites for the American Registry for Diagnostic Medical Sonography’s (ARDMS) MSK sonography certification examination.

1) Overview

The educational process should include four components.

1. Didactic Instructional Sessions: Didactic instruction can occur via a dedicated SPORTS US course or scheduled teaching sessions during the fellowship (see section 4). Didactics should include discussions of ultrasound physics, image acquisition and optimization, normal and pathologic appearance of tissues, ultrasound artifacts, advantages and limitations of SPORTS US relative to other imaging modalities, and diagnostic and interventional techniques pertaining to major body regions encountered in a sports medicine practice.

2. Didactic Practice Sessions: Hands-on didactic practice sessions should be completed under the direct supervision of a qualified mentor. A qualified mentor is defined as an individual who has met the qualifications outlined by the AIUM Training Guidelines for Physicians and Chiropractors Who Evaluate and Interpret Diagnostic Musculoskeletal Ultrasound Examinations (www.aium.org). During these sessions, fellows should apply the knowledge and skills acquired during the didactic instructional sessions in a controlled and supervised environment (see section 5).

3. Mentored Clinical Experience: As knowledge and skills are acquired, the fellow should perform diagnostic scanning and interventional procedures on patients in a
clinical setting under the direct supervision of a qualified mentor. As the fellow gains proficiency in the clinical application of diagnostic and interventional SPORTS US techniques, the level of supervision may be modified as allowed by institutional policy governing teaching rules.

4. **Supplementary and Continuing Education**: The fellow’s education should include supplementary educational experiences to reinforce the knowledge and skills gained during the didactic sessions and mentored clinical experience.

   A. Required:

   (1) Independent scanning practice sessions

   B. Recommended:

   (1) Reading reference texts and journal article

   (2) Presenting SPORTS US related articles in journal club

   (3) Utilizing online educational material and educational DVD’s

   (4) Attending SPORTS US conferences and presentations

The integration of recommended supplementary educational experiences may vary from fellowship to fellowship based on available resources and the overall curriculum structure.

This natural stepwise progression of diagnostic and interventional SPORTS US education will ensure the acquisition of sufficient SPORTS US skills to allow independent practice.
of the core competencies of diagnostic and interventional SPORTS US upon completion of fellowship.
2) Learning Objectives for SPORTS US Training During Fellowship

a) Identify and discuss the function of basic controls on an ultrasound machine console, including:
   i) Transducer selection
   ii) Presets
   iii) Depth
   iv) Focal zone/focal region
   v) Gain
   vi) Time Gain Compensation/Depth Gain Compensation
   vii) Zoom (including read zoom and write zoom)

b) Discuss the basic physics principles of ultrasound, including
   i) How an US image is generated
   ii) Inter-relationship of machine controls (e.g. frequency, resolution and depth)
   iii) Doppler imaging (difference between Power Doppler and Color Doppler)

c) Demonstrate how to optimize an ultrasound image
   i) Superficial structures
   ii) Deep structures

d) Describe the normal ultrasonographic appearance of adipose, muscle, tendon, ligament, bone, fascia, vessels, nerve, and cartilage

e) Describe the common pathological ultrasonographic appearance of adipose, muscle, tendon, ligament, bone, fascia, vessels, nerve, joint and cartilage
f) Discuss the benefits and limitations of SPORTS US relative to other imaging modalities

g) Identify and discuss the source and/or implications of basic ultrasound artifacts, including:

i) Anisotropy

ii) Reverberation

iii) Refraction

iv) Through transmission

v) Acoustic shadowing

h) Perform image acquisition of vascular structures including neovessels using Color and Power Doppler.

i) Perform a SPORTS US examination of the following regions as recommended by the AIUM Practice Guidelines for the Performance of the MSK US Examination (see Appendix 1):

i) Shoulder

ii) Elbow

iii) Wrist-Hand

iv) Hip

v) Knee

vi) Ankle-Foot
j) Obtain an acceptable set of SPORTS US images of the following regions as recommended by the AIUM Practice Guidelines for the Performance of the MSK US Examination (see Appendix 1):

i) Shoulder

ii) Elbow

iii) Wrist-Hand

iv) Hip

v) Knee

vi) Ankle-Foot

k) Demonstrate appropriate labeling of SPORTS US images

i) Use of text insertion

ii) Use of arrows and measurement calipers

l) Demonstrate how to capture, store, and transfer SPORTS US images

m) Generate an appropriate diagnostic SPORTS US report

n) Perform an appropriate SPORTS US evaluation to identify and appropriately document (e.g., capture, label, save, and transfer images; generate a report) of the following conditions:

i) Shoulder

   (1) Supraspinatus full thickness tear

   (2) Supraspinatus tendinopathy

   (3) Bicipital tendinopathy

   (4) Subacromial-subdeltoid bursopathy
ii) Elbow
   (1) Common extensor tendinopathy
   (2) Dynamic examination of the ulnar nerve at the elbow
   (3) Common flexor tendinopathy

iii) Wrist-Hand
   (1) DeQuervain’s tenosynovitis
   (2) Carpal tunnel syndrome

iv) Hip
   (1) Gluteus medius/minimus tendinopathy
   (2) Hamstring tendinopathy
   (3) Knee joint effusion

v) Knee
   (1) Patellar tendinopathy
   (2) Baker’s cyst
   (3) Knee joint effusion

vi) Ankle-Foot
   (1) Peroneal tendinopathy (including dynamic evaluation for instability)
   (2) Achilles tendinopathy
   (3) Plantar fasciopathy
Describe the advantages and disadvantages of needle tracking using an in-plane versus out-of-plane approach, and provide clinical examples of when each approach may be beneficial.

Image a needle using an in-plane (longitudinal or long axis) and out-of-plane (short axis or transverse) approach using ultrasound guidance in a phantom, turkey breast, cadaveric specimen, or other imaging medium, including demonstration of the following transducer manipulations:

i) Translation (sliding/gliding)

ii) Rotation

(1) Describe “cross-cut” artifact when imaging/tracking a needle during an interventional procedure

iii) Heel-toe

iv) Tilting (toggling/wagging)

v) Compression

Demonstrate the ability to efficiently relocate a lost needle during both an in-plane and out-of-plane needle tracking approach.

Demonstrate the ability to guide a needle into a target region or structure using both an in-plane and out-of-plane approach in a phantom, turkey breast, cadaveric specimen, or other imaging medium.

Obtain an acceptable set of pre-, intra-, and post-procedure images of an ultrasound guided procedure.
t) Demonstrate appropriate labeling of the ultrasound guided procedure images.

u) Demonstrate how to store and transfer the ultrasound guided procedure images.

v) Generate an appropriate ultrasound guided procedure report.

w) Perform and appropriately document (e.g., capture, label, save, and transfer images; generate a report) the following ultrasound guided procedures:

i) Shoulder

(1) Subacromial-Subdeltoid bursa injection

(2) Intra-articular glenohumeral joint injection

(3) Intra-articular acromioclavicular joint injection

(4) Bicipital tendon sheath injection

ii) Elbow

(1) Intra-articular elbow joint injection

(2) Peri- or intra-tendinous injection of the common extensor tendon origin

(3) Peri- or intra-tendinous injection of the common flexor tendon origin

iii) Wrist-Hand

(1) Carpal tunnel injection

(2) First dorsal compartment tendon sheath injection

(3) Intra-articular wrist injection
iv) Hip

(1) Intra-articular hip injection

(2) Greater trochanteric bursa injection

(3) Gluteus medius or minimus peri or intra-tendinous injection

v) Knee

(1) Intra-articular knee injection

(2) Iliotibial band/bursa (distal) injection

vi) Ankle-Foot

(1) Intra-articular tibiotalar joint injection

(2) Peroneal tendon sheath injection

(3) Peri- or intra-plantar fascia injection

vii) Miscellaneous

(1) Aspiration or injection of a cyst
3) Resources/References

European Society of Skeletal Radiology (ESSR) Musculoskeletal Ultrasound Scanning Technique Demonstrations, available free at www.ESSR.org

4) Didactic Instructional Sessions

The SPORTS US didactic instructional sessions include six basic units described in this section. Each fellowship should provide appropriate resources for fellows to preview and review the information relevant to each session (see Resource/Reference List). Whereas the number of teaching sessions can be modified as desired or necessary, all fellows should receive instruction in all listed topics. It is strongly recommended that teaching sessions for diagnostic scanning (Units 1-5) utilize established scanning protocols to guide learning and ensure compliance with accepted standards (See SPORTS US Scanning Protocol in Appendix 2). Finally, although the order of Units 2-5 may be modified, fellows should master the diagnostic skills for a specific region before initiating ultrasound guided procedure training in that region (e.g. mastery of the shoulder diagnostic scans should proceed formal training in ultrasound guided shoulder interventions).

The first unit introduces the fellow to basic SPORTS US physics, image acquisition and optimization, normal and pathologic appearance of tissues, ultrasound artifacts, and the advantages and limitations of SPORTS US relative to other imaging modalities. During Units 2-5, a qualified MSK sonographer/sonologist should demonstrate the scanning protocol(s) for one or more body regions, followed by supervised practice. A qualified MSK sonographer is defined as an individual who has met the AIUM Practice Guidelines for the Performance of a MSK US examination. The fellow should only consider these
sessions as an introduction to scanning and independent practice between didactic
sessions is necessary to facilitate skill acquisition (see Supplementary and Continuing
Education above).

Unit 6 involves at least 3 individual sessions dedicated to interventional SPORTS US
procedures. Initial topics reviewed include pharmacologic principles of commonly used
medications, patient selection, aseptic technique for ultrasound guided procedures,
procedural risks, and treatment of common adverse events. Thereafter, the fellow
should be introduced to methods of ultrasound guided needle image optimization,
needle relocation, and dynamic needle tracking using both in-plane and out-of-plane
approaches. Once these skills are mastered, the fellow should be introduced to
common upper and lower extremity ultrasound guided interventional procedures (with
a focus on the core interventional ultrasound competencies) via discussion,
demonstration, and supervised practice under the guidance of a qualified practitioner.
Multiple mediums may be suitable for practicing ultrasound guided interventional
procedures. The ideal mediums are unembalmed cadaveric specimens. However, if
unembalmed cadaveric specimens are unavailable, the fellow can practice patient
positioning and target acquisition on live models followed by practice of needle
visualization and guidance on turkey breasts, pig feet, pig legs, firm tofu, phantoms,
and/or other non-cadaveric specimens. The fellow should practice needle visualization
and guidance techniques between mentored didactic sessions to enhance his/her skills
(see Supplementary and Continuing Education above).
Please note that the educational material has been divided into units to facilitate teaching of related concepts and skills. The number of educational sessions required to teach the knowledge and skills contained in a specific unit may vary depending on scheduling and available resources.

**Unit 1  Principles of SPORTS US and an Introduction to Scanning Techniques**

(1) Instruction in “Knobology” & basic scanning techniques

(2) Instruction on basic US physics

(3) Demonstration of normal sonographic appearance of adipose, muscle, tendon, ligament, bone, fascia, vessels, nerve, and cartilage

(4) Discussion of the common abnormal sonographic appearances of adipose, muscle, tendon, ligament, bone, fascia, vessels, nerve, joint and cartilage

(5) muscle, tendon, ligament, and nerve.

(6) Demonstration of the use of Color and Power Doppler for imaging vascular and neo-vascular structures

(7) Demonstration of transducer movements to optimize image (translation (sliding), rotation, heel-toe, tilt (toggle), and pressure/compression)

(8) Supervised practice

**Unit 2  SPORTS US Examination of the Knee-Hip**
1) Knee US Scanning Protocol
   a) Instruction and supervised practice
   b) Resources
      i) SPORTS US Scanning Protocol Checklists – Knee
      ii) AIUM and ACR Guidelines for Performance of the MSK US Examination

2) Hip and Thigh US Scanning Protocol
   a) Instruction and supervised practice
   b) Resources
      i) SPORTS US Scanning Protocol Checklists – Hip-Thigh
      ii) AIUM and ACR Guidelines for Performance of the MSK US Examination

3) Independent scanning

Unit 3 SPORTS US Examination of the Elbow and Wrist-Hand

1) Elbow US Scanning Protocol
   a) Instruction and supervised practice
   b) Resources
      i) SPORTS US Scanning Protocol Checklists – Elbow
      ii) AIUM and ACR Guidelines for Performance of the MSK US Examination
2) Wrist-Hand US Scanning Protocol
   a) Instruction and supervised practice
   b) Resources
      i) SPORTS US Scanning Protocol Checklists – Wrist-Hand
      ii) AIUM Guidelines for Performance of the MSK US Examination
3) Independent scanning

Unit 4  SPORTS US Examination of the Ankle-Foot

1) Ankle-Foot US Scanning Protocol
   a) Instruction and supervised practice
   b) Resources
      i) SPORTS US Scanning Protocol Checklists – Ankle-Foot
      ii) AIUM and ACR Guidelines for Performance of the MSK US Examination
2) Independent scanning

Unit 5  SPORTS US Examination of the Shoulder

1) Shoulder US Scanning Protocol
   a) Instruction and supervised practice
b) Resources

i) SPORTS US Scanning Protocol Checklists – Shoulder

ii) AIUM Guidelines for Performance of the Shoulder Ultrasound Examination

iii) AIUM and ACR Guidelines for Performance of the MSK US Examination

2) Independent scanning

Unit 6 US Guided Interventional Procedures

1) Didactic instruction and discussion

a) Rationale for US guided procedures

b) Principles of US guided procedures

i) Patient selection

ii) Ergonomics

iii) Aseptic technique

iv) In-plane and out-of-plane needle tracking

v) Image optimization for needle location, relocation and dynamic tracking,

including transducer manipulation: translation (sliding), rotation, heel toe,

tilting (toggling), and compression

vi) Recognizing and correcting “cross-cut” artifact when needle tracking

c) Specific applications and techniques

i) Joint, tendon sheath, nerve, ligament, bursa/cyst
ii) Use of “stand-off”/oblique stand-off, hydrodissection, lavage & aspiration

2) Demonstration, discussion and practice using unembalmed cadaveric specimens, phantoms, turkey breasts, pig feet, pigs legs, firm tofu, or other appropriate medium

a) In-plane and out-of-plane needle location & tracking

b) Needle relocation

c) Cross-cut artifact

d) Commonly performed US guided procedures. It is strongly recommended that these procedures be practiced on an unembalmed cadaveric specimen. However, if this is not feasible, then fellows should practice all aspects of needle visualization and tracking using other appropriate medium, and the principles of the procedures listed below reviewed in a formal didactic setting.

i) Shoulder

(1) Subacromial-Subdeltoid bursa injection

(2) Intra-articular glenohumeral joint injection

(3) Intra-articular acromioclavicular joint injection

(4) Bicipital tendon sheath/groove injection

ii) Elbow

(1) Intra-articular elbow joint injection

(2) Peri- or intra-tendinous injection of the common extensor tendon origin

(3) Peri- or intra-tendinous injection of the common flexor tendon origin

iii) Wrist-Hand

(1) Carpal tunnel injection
(2) First dorsal compartment tendon sheath injection

(3) Intra-articular wrist injection

iv) Hip

(1) Intra-articular hip injection

(2) Greater trochanteric bursa injection

(3) Gluteus medius or minimus peri or intra-tendinous injection

v) Knee

(1) Intra-articular knee injection

(2) Iliotibial band/bursa (distal) injection

vi) Ankle-Foot

(1) Intra-articular tibiotalar joint injection

(2) Peroneal tendon sheath injection

(3) Peri- or intra-plantar fascia injection

vii) Miscellaneous

(1) Aspiration or injection of a cyst
509  **5) Didactic Practice Sessions**

510  Didactic practice sessions should be scheduled with a qualified mentor on regular basis throughout the fellowship. A qualified mentor is one who has met the requirements outlined in the AIUM Training Guidelines for Physicians and Chiropractors Who Evaluate and Interpret Diagnostic Musculoskeletal Ultrasound Examinations (www.aium.org). During these sessions the fellow should apply the knowledge and skills acquired during the didactic instructional sessions in a controlled and supervised educational environment. The didactic practice sessions should include the following:

518  1)  Practice and demonstration of performing a complete ultrasound evaluation of each major region listed in the scanning protocols including proper image optimization and acquisition (see Appendix 1).

521  2)  Practice and demonstration of proper image labeling and storage. Transference of images should follow the guidelines outlined by the Health Insurance Portability and Accountability Act (HIPAA).

524  3)  Review of saved images from the fellow’s self-directed practice scanning sessions and provision of constructive feedback regarding study completeness, and proper image optimization, labeling, storage, and transfer. Deficiencies should be reconciled during subsequent scanning sessions.

529  4)  Practice and demonstration of interventional skills, preferably using unembalmed cadaveric specimens. If cadaveric specimens are not available,
the fellow should practice appropriate imaging of target structures on live models, and should practice needle imaging and guidance techniques using turkey breasts, pig feet, pig legs, firm tofu, phantoms, or other appropriate medium. As the fellow’s skills improve, more advanced SPORTS US examination techniques and interventional procedures should be introduced into the didactic practice sessions (e.g. hydrodissection, percutaneous treatment of calcific tendinosis, etc).
6) Mentored Clinical Experience

The fellow should have regularly scheduled clinical time in which they receive supervised hands-on experience performing diagnostic and interventional SPORTS US on patients. During this experience, fellows should practice and eventually demonstrate competency in all aspects of SPORTS US outlined in the learning objectives. Special attention should be paid to obtaining proficiency in performing the core competency diagnostic ultrasound examinations of the pathologic conditions and ultrasound guided procedures listed in the learning objectives. Determining competence will be discussed further in section 8.

This component of the fellow’s SPORTS US training process is required to ensure that the fellow can proficiently perform the core diagnostic and interventional SPORTS US competencies in clinical practice.
7) Supplementary and Continuing SPORTS US Education

The fellow’s SPORTS US education should not be restricted to the formal educational activities outlined in sections 4 through 6. The fellow should be required to participate in independent practice scanning, during which time they can practice diagnostic scanning techniques, positioning for procedures, and scanning protocols using volunteers. During this time, the fellow should also acquire studies for review with their mentor, as previously discussed. The fellow should also be required to independently practice ultrasound guided needle tracking using the appropriate medium (e.g. cadaver, phantom, etc.).

In addition to the above required supplementary and continuing SPORTS US education experiences, as time and resources allow, the fellow should be encouraged to participate in one or more of the following:

1) Reading SPORTS US journals and texts on a regular basis
2) Reviewing SPORTS US related articles on regular basis. It is recommended that the fellow present a SPORTS US related journal article during journal club at least on a quarterly basis
3) Participating in online SPORTS US related courses or DVD’s
4) Reading online SPORTS US related educational material
5) Attending SPORTS US related conferences
8) Record Keeping and Competency

The fellow should maintain detailed records of all SPORTS US educational activities in which they participate throughout the fellowship. The fellow should also maintain a procedure log of all diagnostic and interventional SPORTS US procedures, including their role in the procedure (e.g., observation, performance, interpretation or reporting).

Detailed recording keeping serves multiple purposes

1) Assists with credentialing
2) Assists in practice accreditation
3) Supports application for certification examinations

Although maintaining records of the type and number of diagnostic and interventional ultrasound procedures is important, performing a specific number of ultrasound procedures does not necessarily determine competence. A milestone system is a more appropriate way of determining competence and is in agreement with graduate medical education competency assessment recommendations by the Accreditation Council for Graduate Medical Education. Milestones use a five point ordinal scale of escalating skill level, with competence determined when a level three or higher has been achieved. Milestones for each learning objective in the SPORTS US should be developed, and the fellow should achieve competence in all of
the milestones upon completion of their fellowship. Sample diagnostic and interventional ultrasound milestones are provided in Appendix 2. Finally, it is recommended that an objective written and practical test be developed to assist with assessing the sports medicine fellow’s SPORTS US knowledge and skill.
Bibliography

Appendix 1. **SPORTS US SCANNING PROTOCOLS**

The following document provides scanning protocols for each body region and is adopted from the AIUM Guidelines for Performance of the MSK US Examination 2012 ([www.aium.org](http://www.aium.org)). Please consider this document as a reference when learning and performing SPORTS US examinations. Additional structures or regions should be examined as clinically indicated or based on practice needs.

**Shoulder**

A complete shoulder examination is performed in most cases, including the structures indicated below. In specific circumstances, a targeted examination of a specific anatomic structure may be performed (e.g., follow-up scan of the supraspinatus tendon to assess for tear progression)

- □ Biceps tendon and muscle
- □ Subscapularis muscle and tendon
- □ Dynamic exam for biceps subluxation & subcoracoid impingement (as indicated)
- □ Acromioclavicular joint
- □ Infraspinatus tendon and muscle
- □ Teres minor tendon and muscle
Posterior glenohumeral joint (including dynamic imaging as indicated)

Spinoglenoid notch (as indicated, region of suprascapular nerve)

Supraspinatus tendon and muscle, with subacromial-subdeltoid bursa

Dynamic rotator cuff evaluation and impingement testing

Suprascapular notch (as indicated, region of suprascapular nerve)

Extended field of view – supraspinatus & infraspinatus muscle bellies (as indicated)

Elbow

Examination may involve a complete assessment of 1 or more quadrants or may be focused on a specific structure.

Anterior:

Anterior humeroradial joint

Radial fossa

Dynamic scan of annular recess of radial neck (supination/pronation, as indicated)

Anterior humeroulnar joint

Coronoid fossa

Biceps tendon and muscle, including dynamic scanning

Brachialis muscle (as indicated)

Brachial artery and vein (as indicated)
Median nerve (as indicated)

Pronator teres muscle and tendon (as indicated)

Radial nerve (as indicated)

Brachioradialis muscle (as indicated)

Lateral:

Lateral epicondyle, common extensor tendon and muscles

Lateral collateral ligament complex

Lateral humeroradial joint (including dynamic imaging as indicated)

Radial nerve bifurcation and course through supinator muscle

Proximal attachment of brachioradialis

Proximal attachment of extensor carpi radialis longus

Medial:

Medial epicondyle, common flexor-pronator tendon and muscles

Ulnar collateral ligament

Dynamic valgus stress of ulnar collateral ligament (as indicated)

Humeroulnar joint

Ulnar nerve (also included in posterior region scan)

Dynamic flexion-extension (as indicated)

-evaluate for ulnar nerve subluxation

-evaluate for snapping triceps tendon
Posterior:
- Triceps tendon muscles
- Olecranon fossa and posterior joint space
- Olecranon process
- Olecranon bursa
- Ulnar nerve (also included in medial region scan)
- Dynamic flexion-extension (as indicated) (also included in medial region scan)
  - evaluate for ulnar nerve subluxation
  - evaluate for snapping triceps tendon

Wrist and Hand

Examination may involve a complete assessment of 1 or more of the 3 anatomic regions
or may be focused on a specific structure.

Volar:
- Carpal tunnel contents
  - Flexor retinaculum
- Median nerve
- Flexor pollicis longus tendon
- Flexor digitorum profundus and superficialis tendons
Dynamic examination with flexion & extension – tendon & nerve motion

- Palmaris longus tendon
- Flexor carpi radialis longus tendon and radial artery
- Ulnar nerve and ulnar artery within Guyon’s canal
- Flexor carpi ulnaris tendon
- Joints as clinically indicated (e.g. volar radiocarpal joint)

**Ulnar/Medial:**
- Extensor carpi ulnaris tendon and muscle
- Dynamic examination for extensor carpi ulnaris subluxation
- Triangular fibrocartilage complex
- Ulnocarpal joint

**Dorsal:**
- Extensor retinaculum, 6 compartments, 9 tendons and muscles
- Dynamic tendon examination – flexion/extension of the fingers (as indicated)
- Dorsal scapholunate ligament
- Joints (as clinically indicated)
  - Radiocarpal (RC), metacarpophalangeal (MCP), proximal interphalangeal (PIP),
  - Distal interphalangeal (DIP)
  - Dorsal and volar
- Superficial radial nerve (as indicated)
Examination may involve a complete assessment of 1 or more of the 4 anatomic regions or may be focused on a specific anatomic structure.

**Anterior Region (patient supine):**

- Sagittal oblique, parallel to long axis of femoral neck
- Femoral head, neck, capsule, and anterior synovial recess
- Hip joint assessment for effusion

**Sagittal plane**
- Anterior labrum

**Transverse**
- Femoral vessels and nerve
- Iliopsoas muscle, tendon and bursa
- Sartorius and tensor fascia lata tendons and muscles
- Lateral femoral cutaneous nerve
- Rectus femoris tendon(s) and muscles
- Dynamic scanning if snapping hip (as indicated).
Lateral Region (side lying with hip flexed 20-30 degrees)

- Gluteus maximus – fascia lata – tensor fascia lata
- Gluteus minimus tendon and muscle
- Gluteus medius tendon and muscle
- Greater trochanteric bursa (subgluteus maximus bursa)
- Dynamic scanning for snapping hip (as indicated)

Medial Region

Supine neutral

- Femoral vessels and nerve (unless already examined with anterior region)

Abducted-Externally rotated (frog leg)

- Adductor muscles (A. longus and gracilis → A. brevis → A. magnus) and tendons
- Distal iliopsoas tendon
- Pubic bone and symphysis (joint)
- Distal rectus abdominis muscle and tendon
Posterior (prone w/wo pillow under hips)

- Gluteus maximus muscle and tendon
- Gluteus medius muscle and tendon
- Deep short external rotators (as indicated)
- Hamstring tendon and muscles
- Ischial tuberosity and bursal region
- Sciatic nerve
- Posterior hip joint (as indicated)

**Prosthetic Hip**

- Assess for joint effusions and extra-articular fluid collections
- Greater trochanter and integrity of gluteal attachments
- Iliopsoas tendon and bursa
- Impingement on acetabular component

**Knee**

Examination may involve a complete assessment of 1 or more of the 4 quadrants of may be focused on a specific anatomic structure.
Anterior:

- Quadriceps tendon and muscles
- Suprapatellar recess of knee joint
- Patella and prepatellar bursa
- Patellar tendon and tibial tubercle
- Superficial infrapatellar bursa
- Deep infrapatellar bursa
- Vastus medialis and medial retinaculum (also with medial region scan)
- Vastus lateralis and lateral retinaculum (also with lateral regional scan)
- Distal femoral cartilage (as indicated)

Medial:

- MCL/tibial collateral ligament
- Valgus stress testing (as indicated)
- Medial meniscus and tibiofemoral joint space
- Pes anserine tendons and bursa
- Medial patellar retinaculum and patellofemoral joint (also with anterior region scan)

Lateral:

- Iliotibial band
- Lateral meniscus and tibiofemoral joint space
- LCL/fibular collateral ligament
Varus stress test (as indicated)
Biceps femoris tendon and muscles
Popliteus tendon and muscle
Lateral patellar retinaculum and patellofemoral joint (also with anterior region scan)
Proximal tibiofibular joint (as indicated)

Posterior:
Popliteal fossa
Popliteal artery and vein
Semimembranosus tendon and muscle
Medial & lateral gastrocnemius muscles, tendons, and bursae
Sciatic, tibial, and common fibular nerves
Posterior horns of both menisci (as indicated) and tibiofemoral joint
PCL (as indicated) (may be seen in sagittal oblique plane)

Ankle/Foot
Examination may involve a complete assessment of 1 of the 4 quadrants or may be focused on a specific structure.

Anterior:
Tibialis anterior (from musculotendinous junction to insertion)
Extensor hallucis longus tendon and muscle
Extensor digitorum longus tendon and muscle
Peroneus tertius (congenitally absent in some patients)
Deep fibular/peroneal nerve and dorsalis pedis artery
Anterior joint recess (effusion, loose bodies, and synovial thickening)
Anterior joint capsule
Anterior inferior tibiofibular ligament

Medial:
Posterior tibialis tendon and muscle
Flexor digitorum longus tendon and muscle
Posterior tibial nerve
Medial and lateral plantar nerves (as indicated)
Tibial artery and veins
Flexor hallucis longus tendon and muscle
Deltoid ligament and medial tibiotalar joint

Lateral:
Fibularis (peroneus) longus & brevis tendons and muscles
Superior fibular (peroneal) retinaculum
Dynamic assessment for fibular (peroneal) subluxation (as indicated)
Anterior talofibular ligament
Calcaneofibular ligament (incl. lateral tibiotalar joint and posterior subtalar joint)

Posterior talofibular ligament (as able and indicated)

Sural nerve (as indicated)

Posterior:

Achilles tendon and paratenon

Dynamic scanning in of Achilles (as indicated to assist with tear evaluation)

Retrocalcaneal bursa

Retro-Achilles/Superficial Achilles bursa

Plantaris tendon (may be absent) (as indicated)

Posterior tibiotalar and subtalar joints

Plantar fascia

Plantar fat pad

Digital:

Assess for synovitis, dorsal and/or plantar

Metatarsophalangeal (MTP) joints

Interphalangeal (IP) joints

Interdigital:

Dorsal or plantar approach can be used

Longitudinal and transverse views
intermetatarsal bursa (on the dorsal aspect of the interdigital nerve)

Dynamic scanning, applying pressure for Morton’s neuroma, and/or ultrasonographic Mulder’s click (as indicated)
Appendix 2. SPORTS US Milestone Examples.

### Diagnostic ultrasound examination of a full thickness supraspinatus tear.

<table>
<thead>
<tr>
<th>Level 1</th>
<th>Level 2</th>
<th>Level 3</th>
<th>Level 4</th>
<th>Level 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Able to verbally describe the indications for a diagnostic ultrasound of the shoulder and list the structures that need to be imaged during a complete sonographic shoulder examination</td>
<td>Able to correctly identify and sonographically image all portions of the supraspinatus tendon in long and short axis in an normal shoulder</td>
<td>Able to consistently identify and sonographically image a full thickness supraspinatus tear, acquire, label, and save an appropriate image; and generate an appropriate report</td>
<td>Able to consistently and independently perform the skills outlined in level 3. Integrates current research and literature with guidelines to recommend management.</td>
<td>Demonstrates expertise in the evaluation of supraspinatus tendon tears at a level expected of a subspecialist. Performs research related to imaging of the supraspinatus tendon.</td>
</tr>
</tbody>
</table>

### Ultrasound guided glenohumeral joint injection.

<table>
